

Honda Engine Parts FAQs

Q: How do I know what series my engine is?

A: It's easy to find your Honda engine's series (also called model) number. On your engine, there should be a model sticker. All Honda engines begin with the letter "G". On their website, Honda gives the following as an example:

GX160T1QXC

- GX – Engine Series
- 160 – Engine Size
- T1 – Manufacturing Location and Model Version
- QXC – Engine Type Code

If you need the engine serial number, this can be found etched into the side of the engine. All Honda engines have a 4 or 5 letter prefix and a 7-digit number in their serial numbers.

Q: Does the year matter on my Honda engine?

A: In regards to safety and advanced technology, the year does matter on your Honda engine. A newer engine will be a more reliable option versus an engine produced 10 years ago. While Honda engines are known to be durable and long-lasting, the integrity of them will naturally decline with age, mileage, and use.

Q: Where do I find model number on my Honda engine?

A: Locate the model sticker on your Honda engine. All Honda engines begin with the letter "G."

When you locate your Entire engine model and year made we can send you a parts list for your engine. Please call us at 800-328-0328 X1 or email us at winco@electricaladvertiser.com
